

Omiba Core Global Growth

Managed Portfolio Service (MPS)

Omiba Core Global Growth MPS Factsheet – February 2025

FOR PROFESSIONAL ADVISERS ONLY

PORTFOLIO OBJECTIVE AND OVERVIEW

The OMBA Core Global Growth Portfolio is intended for investors with at least a medium to high attitude to risk and time horizon of at least 5 years. The portfolio seeks to achieve a long-term return of 3.0% above inflation measured by the UK Consumer Price Index (CPI).

The portfolio seeks to provide a diversified portfolio of global equity securities (allocated across regions, countries, and sectors) and Pound sterling denominated or hedged fixed income.

The portfolio aims to achieve this objective by investing primarily through collective investment schemes structured as Exchange Traded Funds (ETFs) for the fixed income exposure and in the OMBA Global Equity UCITS Fund, which is an actively managed global equity fund of ETFs for the equity exposure.

ASSET ALLOCATION

TOP HOLDINGS (LOOK-THROUGH)

TOP 10 HOLDINGS EX. CASH (% OF PORTFOLIO)

MANAGER COMMENTS

Equity markets were mixed in February (MSCI ACWI, -0.6% MoM), with the US (S&P 500, -1.3% MoM) once again lagging behind Europe (Stoxx 600, +3.4% MoM) and China (CSI 300, +1.9% MoM). The latter benefitted from continuous flows to Hong Kong by mainland Chinese investors (Hang Seng, +13.4% MoM). US Government bond yields fell (US10Y, -35bps) due to signs of economic slowdown evident in weaker consumer sentiment surveys and PMIs. This boosted traditional multi-asset portfolios and long duration positions (iShares Treasury 7-10yr UCITS ETF, +2.4% MoM). The US Dollar subsequently declined (DXY Index, -0.7% MoM), especially against the Japanese Yen (USDJPY, -2.9% MoM). The stronger Yen dragged Japanese equities lower (Nikkei, -6.0% MoM), due to the exporting nature of the index, despite robust economic growth and earnings projections. Lower rates and geopolitical concerns further fuelled the gold rally (LBMA Gold, +1.5% MoM), but commodity indices were weak as oil prices fell (Brent \$/bbl, -4.7% MoM). The US administration's policies and communication have become a source of uncertainty for domestic markets as can be seen in US small cap performance (Russell 2000, -7.3% MoM) which despite lower bond yields were the worst performing segment. Emerging markets excluding China were soft, with India (Nifty 50, -5.8% MoM) and South Korea (KOSPI, -7.5% MoM) standing out. Mexican equities (iShares MSCI Mexico Capped UCITS ETF, +3.4% MoM) finished the month higher despite tariffs looming over the horizon. Our overweight positions in both China and Europe have helped year-to-date.

Reliance should not be placed on the views and information in this material when taking individual investment and/or strategic decisions.

The investments of the Managed Portfolios are subject to normal market fluctuations. The value of the investments of the Managed Portfolios and any income derived from them can fall as well as rise and investors may not get back the money they originally invested. If investing in foreign currencies, the return in the investors reference currency may increase or decrease as a result of currency fluctuations. Past performance is not a reliable indicator of future results and may not be repeated. Forecasts are not a reliable indicator of future performance.

Performance reflects the model performance including the underlying costs of the holdings of the model. It does not include any transaction costs imposed by the platform or executing venue that would have been incurred in rebalancing the model or changes to the model. The

implementation of this model may differ depending on the platform provider and the ability of the platform to provide access to the underlying funds and securities including the use of Omiba Funds in place of direct holdings in ETFs. The above performance has used the direct ETFs and uses a higher MPF of 0.30% compared to the 0.10% MPF charged on this model. This may lead to difference in allocations, performance, and cost.
